

Hazard Analysis Guidance

Based on the data you have provided this tool has identified the above hazards that you may need to consider including in your Hazard Analysis. This list identifies a few common hazards, their type, and associated considerations. It is not a comprehensive list of all possible hazards and each facility will have it's own unique challenges.

This guidance and the associated informational tool should only be considered a starting point. Now it is up to you and your colleagues to determine which hazards are known and foreseeable hazards for your facility and what actions are appropriate to mitigate those hazards.

There are a number of resources available that can help you navigate the development of a full Food Safety Plan. One of those is FDA's Draft Guidance #245 Hazard Analysis and Risk-Based Preventive Controls. It can be found [here](#). Additionally, the Food Safety Preventive Control Alliance (FSPCA) with help from FDA and other stakeholders has created a guide for developing a Food Safety Plan for livestock feed which can be found [here](#). If you have further questions, you may reach out to your local Commercial Feed Inspector or contact the Commercial Feed Program at 402-471-2351 or agr.webmaster@nebraska.gov.
