This document certifies the above mentioned artifacts were compared to the Standards of the State of Kansas which are traceable to the National Institute of Standards and Technology. The conventional mass is the weight in normal air (1.2 mg/cm^3) at 20 °C versus the reference density of 8.0 g/cm^3 Calibration of listed items was performed according to NISTIR 6969, SOP 4 (Double Substitution) and/or NISTIR 5672, SOP 5 (3-1).

Tolerances were evaluated to ASTM Class 4. Surface finish and magnetism were not evaluted as it is assumed to be done by the manufacturer.

Uncertainty Statement:

The combined standard uncertainty includes the standard uncertainty reported for the; standards, tare weights, the standard uncertainty for the measurement process, the standard uncertainty for air buoyancy corrections as stated in OIML R111-1 [2004E] eq. C.6.3-1 , and a component of uncertainty to account for any observed deviations (Bias) from NIST (National Institute of Standards and Technology) values that are less than surveillance limits. Factors not considered in the evaluation: magnetism, weights are considered to meet magnetism specifications unless measurement aberrations are noted, balance eccentricity and linearity, these factors are considered as a part of the measurement assurance process when using a check standard with adequate degrees of freedom. The combined uncertainty is multiplied by the coverage factor (k-value) reported to give an expanded uncertainty, which defines an interval having a level of confidence of 95.45 percent. The coverage factor reported is based on the effective degrees of freedom as outlined in JCGM 100:2008 section G.4. The expanded uncertainty presented in this report is also consistent with and follows NISTIR 6969, SOP 29. The expanded uncertainty is not to be confused with a tolerance limit for the user during application.

Uncertainty Analysis:

Nominal	S_p	$u_{S\ (k=1)}$	$u_{tare\ (k=1)}$	$u_{Air\ Buoyancy\ Eq.}$	ρ_{air}	Procedure
500 mg	0.000561	0.000255	No Tare	0.0000206	1.16169	SOP 5

200 mg	0.000293	0.000150	No Tare	0.00000823	1.16161	SOP 5
100 mg	0.000334	0.000150	No Tare	0.00000411	1.16268	SOP 5
50 mg	0.000199	0.0000950	No Tare	0.00000206	1.16203	SOP 5
20 mg	0.000114	0.0000650	No Tare	0.0000218	1.16182	SOP 5
20 mg	0.000114	0.0000650	No Tare	0.0000218	1.16171	SOP 5
10 mg	0.000158	0.0000700	No Tare	0.0000110	1.16186	SOP 5
5 mg	0.000104	0.0000550	No Tare	0.00000549	1.16202	SOP 5
2 mg	0.0000948	0.0000550	No Tare	0.00000220	1.16228	SOP 5
2 mg	0.0000948	0.0000550	No Tare	0.00000220	1.16254	SOP 5
1 mg	0.000189	0.0000650	No Tare	0.00000110	1.16279	SOP 5

All values listed as a component of the overall uncertainty are in units of milligrams (mg) or (mg/cm^3).

Traceability Statement:

The Kansas Metrology Laboratory Standards are traceable to the SI through NIST and are part of a comprehensive measurement assurance program for ensuring continued accuracy and measurement traceability within the level of uncertainty reported by this laboratory. The laboratory test number identified above is the unique report number to be used in referencing measurement traceability for artifacts identified in this report only.

453.59237 g = 1 lb

28.349523125 g = 1 oz

Uncertainty Statement:

The combined standard uncertainty includes the standard uncertainty reported for the standard, the standard uncertainty for the measurement process, the standard uncertainty for any uncorrected errors associated with buoyancy corrections(applies to mass values only), the standard uncertainty for any uncorrected errors associated with temperature correction(applies to length and volume values only), and a component of uncertainty to account for any observed deviations from NIST(The National Institute of Standards and Technology) values that are less than surveillance limits. The combined standard uncertainty is multiplied by a coverage factor of 2 to give an expanded uncertainty, which defines an interval having a level of confidence of approximately 95 percent. The expanded uncertainty presented in this report is consistent with the 1993 ISO Guide to the Expression of Uncertainty in Measurement and follows NISTIR 6969, SOP 29. The expanded uncertainty is not to be confused with a tolerance limit for the user during application.

Traceability Statement:

The Kansas Metrology Laboratory Standards are traceable to the SI through NIST and are part of a comprehensive measurement assurance program for ensuring continued accuracy and measurement traceability within the level of uncertainty reported by this laboratory. The laboratory test number identified above is the unique report number to be used in referencing measurement traceability for artifacts identified in this report only.

Condition of Item(s) Submitted for Testing:

Minor wear.

Treatment of Item(s) before Testing:

Item(s) were tested as found.

Documentary Standards:

-NIST Handbook 105 Series
-NISTIR 6969: SOP 8, SOP 4, and/or SOP 7
OR
-ASTM E617 or OIML R 111-1

Environmental Conditions:

Temperature:	19.3 °C
Barometric Pressure:	736.33 mmHg
Relative Humidity:	47.2 %

Test Date: 10/15/2015
Due Date: 10/14/2016 -Per state statute K.S.A. 83-304(a).

Submitted on: 10/13/2015

Vehicle Number: 45

Item(s)

Tested	Adjusted	Rejected
5	3	0

Quantity	Nominal Volume	Type
5	5 gal	Handheld Test Measure "To Deliver"

The calibration of items is performed according to NISTIR 7383, SOP 19 Volume Transfer. Tolerances are applied from NISTHB 105-3. The volume applies when a 10 second drain is observed for 5 gallon hand held test measures. For 5 gallon bottom drop test measures and provers a 30 second drain applies. The drain time starts when the cessation of the main flow is observed.

Nominal Volume	Serial Number	Material	Cubical Coefficient of Expansion (/°F)	**Volume as Found @ 60 °F**	Tolerance ±	Expanded Uncertainty (U), (k=2.02), ±	**Volume as Left @ 60 °F**	Adjusted/ In Tolerance/ Rejected
5 gal	4393-5-E	Stainless Steel	0.0000265	**5.00404 gal**	0.0025 gal	0.00082 gal	**5.00014 gal**	Adjusted

Uncertainty Statement:

The combined standard uncertainty includes the standard uncertainty reported for the standards, the standard uncertainty for the measurement process, the standard uncertainty for the water density equation (Metrologia Tanaka, et al), the standard uncertainty for any uncorrected errors associated with temperature correction (applies to length and volume values only), the standard uncertainty for reading the meniscus (when applicable), the standard uncertainty for viscosity, and a component of uncertainty to account for any observed deviations from NIST(The National Institute of Standards and Technology) values that are less than surveillance limits. The combined standard uncertainty is multiplied by the coverage factor (k-value) reported to give an expanded uncertainty, which defines an interval having a level of confidence of 95.45 percent. The k-value reported is based on the effective degrees of freedom as outlined in JCGM 100:2008 section G.4. The expanded uncertainty presented in this report is consistent with the 1993 ISO Guide to the Expression of Uncertainty in Measurement and follows NISTIR 6969, SOP 29. The expanded uncertainty is not to be confused with a tolerance limit for the user during application.

Traceability Statement:

The Kansas Metrology Laboratory Standards are traceable to the SI through NIST and are part of a comprehensive measurement assurance program for ensuring continued accuracy and measurement traceability within the level of uncertainty reported by this laboratory.
