This document certifies the above mentioned artifacts were compared to the Standards of the Stand of Kansas which are traceable to the National Institute of Standards and Technology. The conventional mass is the weight in normal air (1.2 mg/cm³) at 20 °C versus the reference density of 8.0 g/cm³ Calibration of listed items was performed according to NISTIR 6969, SOP 4 (Double Substitution) and/or NISTIR 5672, SOP 5 (3-1).

Tolerances were evaluated to ASTM Class 4. Surface finish and magnetism were not evaluted as it is assumed to be done by the manufacturer.

Test Date: 10/27/2015

Kansas Metrology Laboratory

Uncertainty Statement:

The combined standard uncertainty includes the standard uncertainty reported for the; standards, tare weights, the standard uncertainty for the measurement process, the standard uncertainty for air buoyancy corrections as stated in OIML R111-1 [2004E] eq. C.6.3-1, and a component of uncertainty to account for any observed deviations (Bias) from NIST (National Institute of Standards and Technology) values that are less than surveillance limits. Factors not considered in the evaluation: magnetism, weights are considered to meet magnetism specifications unless measurement aberrations are noted, balance eccentricity and linearity, these factors are considered as a part of the measurement assurance process when using a check standard with adequate degrees of freedom. The combined uncertainty is multiplied by the coverage factor (k-value) reported to give an expanded uncertainty, which defines an interval having a level of confidence of 95.45 percent. The coverage factor reported is based on the effective degrees of freedom as outlined in JCGM 100:2008 section G.4. The expanded uncertainty presented in this report is also consistent with and follows NISTIR 6969, SOP 29. The expanded uncertainty is not to be confused with a tolerance limit for the user during application.

Uncertainty Analysis:

| Nominal | S _p | U _{S (k =1)} | U _{tare (k =1)} | U _{Air Buoyancy Eq.} | $ ho_{air}$ | Procedure |
|---------|----------------|-----------------------|--------------------------|-------------------------------|-------------|-----------|
| 500 mg | 0.000561 | 0.000255 | No Tare | 0.0000211 | 1.15053 | SOP 5 |
| 200 mg | 0.000293 | 0.000150 | No Tare | 0.00000845 | 1.15032 | SOP 5 |
| 200 mg | 0.000293 | 0.000150 | No Tare | 0.00000845 | 1.15034 | SOP 5 |
| 100 mg | 0.000334 | 0.000150 | No Tare | 0.00000423 | 1.15027 | SOP 5 |
| 50 mg | 0.000199 | 0.0000950 | No Tare | 0.0000121 | 1.14994 | SOP 5 |
| 20 mg | 0.000114 | 0.0000650 | No Tare | 0.0000217 | 1.14970 | SOP 5 |
| 20 mg | 0.000114 | 0.0000650 | No Tare | 0.0000217 | 1.14955 | SOP 5 |
| 10 mg | 0.000158 | 0.0000700 | No Tare | 0.0000109 | 1.14945 | SOP 5 |
| 5 mg | 0.000104 | 0.0000550 | No Tare | 0.00000546 | 1.14929 | SOP 5 |
| 2 mg | 0.0000948 | 0.0000550 | No Tare | 0.00000219 | 1.14916 | SOP 5 |
| 2 mg | 0.0000948 | 0.0000550 | No Tare | 0.00000219 | 1.14903 | SOP 5 |
| 1 mg | 0.000189 | 0.0000650 | No Tare | 0.00000109 | 1.14879 | SOP 5 |

All values listed as a component of the overall uncertainty are in units of milligrams (mg) or (mg/cm³).

Traceability Statement:

The Kansas Metrology Laboratory Standards are traceable to the SI through NIST and are part of a comprehensive measurement assurance program for ensuring continued accuracy and measurement traceability within the level of uncertainty reported by this laboratory. The laboratory test number identified above is the unique report number to be used in referencing measurement traceability for artifacts identified in this report only.

Condition of Item(s) Submitted for Testing: Minor wear.

Treatment of Item(s) before Testing:

Item(s) were tested as found.

Documentary Standards:

NIST Handbook 105 Series, NISTIR 6969, SOP 4, NISTIR 5672, SOP 5, & ASTM E 617-13 or OIML R111-1

Item(s) Received on:

10/13/2015

Item(s) Acclimated:

10/14/2015 8:58:00 AM

Environmental Conditions:

| Temperature | Barometric Pressure | Relative Humidity |
|-------------|---------------------|-------------------|
| 20.4 °C | 729.50 mmHg | 44.2 % |

Values are averages recorded over the duration of testing

Table D - Troemner 31 lb Class F Weight Kit, S/N 13A9. Condition: fair.

Test No.: 16003 Page 5 of 5

Uncertainty Statement:

The combined standard uncertainty includes the standard uncertainty reported for the standard and the standard uncertainty for the measurement process. The combined standard uncertainty is multiplied by a coverage factor of 2.02-2.07 to give an expanded uncertainty, which defines and interval having a level of confidence of approximately 95 percent. The expanded uncertainty presented in this report is consistent with the 1993 ISO Guide to the Expression of Uncertainty in Measurement. The expanded uncertainty is not to be confused with a tolerance limit for the user during application.

Traceability Statement:

Standards used for comparison are traceable to United States national standards at NIST and are part of a comprehensive measurement assurance program for ensuring continued accuracy and traceability reported by this laboratory. The laboratory test number identified above is the unique report number to be used in referencing measurement traceability for artifacts identified in this report only. Traceability is maintained to the SI using the following conversion: 1 lb = 0.45359237 kg

Supplemental Information

Description of artifacts submitted for testing:

One hundred Class F stainless steel, aluminum and cast iron test weights. Assumed densities are listed in the appropriate table.

Conditions of artifacts submitted for testing:

Condition is noted in the title of the appropriate table. Twenty five lb artifacts D41, D43, D44 and D34 were found to have significant error due to no disk and lead seal in the adjusting cavity. Several 1000 lb artifacts have damage to the corners of the weights. One thousand lb artifacts A-6 and A-11 appear to have reached the end of their service life; the adjusting cavities are full and future adjustment will not be possible by the WDA lab. All of the lead seals in the 1000 lb artifacts appears to have been repeatedly melted and are excessively thick; this results in a seal that is brittle and not secure.

Treatment of artifacts prior to testing:

Artifacts were clean upon arrival; no additional treatment needed. Thermal equilibrium: 24 hours next to balance in the laboratory.

Equipment and Standards:

| Balance | Range | Standards Used |
|-----------------|----------------|----------------|
| Mettler AX26 | 0 g - 22 g | WY WS, 5SY3 |
| Mettler XP505 | 0 g - 500 g | WY WS, 5SY3 |
| Mettler XP5003 | 0 kg - 5 kg | WY WS, 5SY3 |
| Mettler XP32003 | 0 kg - 32 kg | WY WS |
| Mettler XP604 | 0 kg - 600 kg | WY WS |

Procedure used:

Single Substitution Method (NISTIR 6969, SOP 7)

Environmental conditions are maintained within the following parameters:

Temperature18 °C to 27 °C

Relative Humidity
40 % to 60 %

Date Artifacts Received: January 11, 2016 Date of test: January 12, 2016 through January 14, 2016

^{*}Prover Volume is Volume to Deliver after a 30 second pour and 10 second drain time at a reference temperature of 60° F.

Form Number: WDAML503 Revision 1 September 2009

^{*}Prover Volume is Volume to Deliver after the cessation of flow and 30 second drain time at a reference temperature of 60° F.

Test No.: 16004 Page 2 of 2

Uncertainty Statement:

The combined standard uncertainty includes the standard uncertainty reported for the standard and the standard uncertainty for the measurement process. The combined standard uncertainty is multiplied by a coverage factor of 2.02 to give an expanded uncertainty, which defines and interval having a level of confidence of approximately 95 percent. The expanded uncertainty presented in this report is consistent with the 1993 ISO Guide to the Expression of Uncertainty in Measurement. The expanded uncertainty is not to be confused with a tolerance limit for the user during application.

Traceability Statement:

Standards used for comparison are traceable to United States national standards at NIST and are part of a comprehensive measurement assurance program for ensuring continued accuracy and traceability reported by this laboratory. The laboratory test number identified above is the unique report number to be used in referencing measurement traceability for artifacts identified in this report only. Traceability to the SI is maintained using the conversion factor: 1 gallon = $231 \text{ in}^3 = 3.785412 \text{ L} = 0.003785412 \text{ m}^3$.

Supplemental Information

Description of artifacts submitted for testing:

Two-5 gallon Stainless Steel Test Measures and three-5 gallon stainless steel provers; assumed Cubical Coefficient of Thermal Expansion 0.0000265/°F.

Conditions of artifacts submitted for testing:

Artifacts were in good condition for the type and class.

Treatment of artifacts prior to testing:

Artifacts were degreased and thoroughly rinsed prior to calibration. Artifacts WDA 15877 and WDA 15879 were missing identification plate and were affixed with seals bearing the serial numbers. "As Found" Prover Error for artifact 145 was 0.36 in³ and for artifact 146 was -0.54 in³; all other artifacts were not adjusted.

Equipment and Standards:

Standard

NBS 4214

Range 5 gallons

Procedure used:

Volume Transfer Method (NISTIR 7383, SOP 19)

Average environmental conditions at time of test:
