Calibration Certificate of Mass

Calibration Date: May 24, 2019 Certificate Number: 2019-073-1

Submitted By: FSCP Area 60

Point of Contact: Todd Blaske 3721 West Cuming St. Ph. 402-471-3422

Lincoln, NE 68524 email: Todd.blaske@nebraska.gov

PO Number:

Test Item(s): (2)-15, (20)-25lb weights

Condition: Good (some wear)

Date Received: May 22, 2019 Serial Number(s): See Next Page **Artifact(s) Description:** ID / Asset Number: FSCP Area 60

Manufacture: Tromner Class Specification: NIST Class F Material:

Reference Standards Used: **Procedure Used: Equipment Used:**

NSL lb standards NIST HB 6969, SOP 8 (2018) Mettler KA30-3

> Metrologist: **JPL**

Environmental Cond. Temp: 20.1 °C 762.5 mmHg Relative Humidity: 59.5 % Pressure:

Pertinent Information

- The artifact(s) listed in this document have been found and/or left within the maximum permissible error for the specification stated above, except as noted. An artifact is considered in-compliance when the correction plus the measurement uncertainty is equal to or less than the maximum permissible error. RED print indicates an out-of-compliance reading. All of the tolerances and specifications were evaluated according to ASTM E617 (2013) and/or NIST HB 105-1 (1990).
- All corrections stated in this report correlate to a "Conventional Mass" (CM), also known as "apparent mass", scale verses 8.0 g/cm³ reference mass density and an air density of 1.2 mg/cm³ at 20 °C.

Traceability Statement

The artifact(s) described in this certificate have been compared to the Standards of the State of Nebraska. The Standards of the State of Nebraska are traceable to the International System of Units (SI) through the National Institute of Standards and Technology (NIST) and are part of a comprehensive measurement assurance program for ensuring continued accuracy and measurement traceability within the level of uncertainty reported by this laboratory. The calibration number for this certificate is the only unique calibration number to be used in referencing measurement traceability for the artifact(s) described in this certificate.

Uncertainty Statement

The combined standard uncertainty includes uncertainties reported for the standard, uncertainties associated with the measurement process, uncertainties for any observed deviations from reference values which are less than surveillance limits and the standard uncertainty for any uncorrected errors associated with air buoyance corrections. The combined standard uncertainty is multiplied by a coverage factor (k), to give the expanded uncertainty, which defines an interval with a 95.45 percent level of confidence. The expanded uncertainty presented in this report is consistent with the Guide to the Expression of Uncertainty in Measurement (2008, revised 2012). Some components of the calibration can be evaluated through a Type A evaluation, or the method of evaluation of uncertainty by the statistical analysis (standard deviation) from the observations taken. Magnetic testing has not been performed, therefore, there are no components for the effects of it in the uncertainty budget.
