

MatMaCorp

The MatMaCorp diagnostic system is easy to use, portable, and does not require laboratory tools or technical skills. This makes for a device that provides rapid answers anywhere in the world, under any conditions. The system offers rapid, real-time, low throughput testing, for veterinary clinics, farms and producers, to analyze animal characteristics, provide on-site surveillance and detect genetic traits that may result in disease.

MatMaCorp systems are widely used in a variety of applications ranging from testing dairy cattle for the A2 form of beta-casein, remote testing for African swine fever, managing congestive heart failure in American cattle and on farm surveillance for porcine reproductive and respiratory syndrome virus (PRRSV) in swine.

MatMaCorp is the developer and manufacturer of a portable lab that's changing livestock and companion animal testing. It allows veterinarians and livestock producers to test for diseases and genetic traits on-site. Our lab in a box is simple and portable and our product line supports tests for dairy cattle, swine, and beef cattle. Our products are currently being used in ten countries across five continents.
