

Nebraska's Weed Management Areas

Weed Management Areas (WMAs) are local organizations that bring together landowners and managers (private, city, county, State, and Federal) with a common goal of noxious and invasive weed control. By pooling funds and resources, mapping, monitoring and control of large geographic areas can be completed.

Projects are funded mainly by grants from a number of partners including: Nebraska Environmental Trust, Nebraska Legislature – LB 701, Nebraska Department of Agriculture, NRCS – CCPI funding, NRD's, Platte River Recovery and Implementation Program and numerous federal, state and local grants.
