

Valley® Irrigation

Valley Irrigation founded the center pivot irrigation industry in 1954, and our brand is the worldwide leader in sales, service, quality and innovation. With historical sales of more than 250,000 center pivots and linears, our equipment annually irrigates approximately 25 million acres (10 million hectares) around the world.

Products Offered

- Center Pivots
- Linear (Lateral) Machines
- Corner Machines
- Remote Management Technology
- Smart Control Panels
- Pumping Solutions
- GPS Solutions
- Irrigation Scheduling
- Variable Rate Irrigation
- Crop Anomaly Detection Services

To feed and clothe the increasing population of a diverse world, growers require solutions that help them produce greater yields while using less energy and water. Valley Irrigation supplies farmers around the globe with durable machines and reliable technology to help them be more efficient and make smarter business decisions based on field data.

Valley center pivot and linear (lateral) irrigation machines are trusted by generations of growers to withstand the demands of nearly any climate or terrain, and maximize yields for nearly any crop. Valley remote management helps them monitor and control their equipment from anywhere, improving their quality of life. Industry-best Valley technology solutions allow them to apply water and crop protectant with efficiency and accuracy.

As the founder of the entire center pivot industry, we remain dedicated to providing innovative, precision irrigation solutions now and into the future.
